

## ANIMAL CELLS: A CELL IS LIKE A CITY...

### Cells and cities have parts that perform specific roles

Think about the parts of a city- how do they compare to the different parts that can be found in an animal cell in terms of the jobs they do?

## A cell is like a city because...

In an animal cell...		In a city...
	The day-to-day running is controlled	
	The edge is recognized by....	
	Energy is made available	
	Resources are needed because...	

How are cells *different* to a city?
